ACCELERATE LOCALISATION

Control de localisation process

ALWAYS REACHABLE

Select the tester that best match your project and your target audience. Assign them tasks, track progress and enjoy a seamless workflow.

Shorten time to market

ALWAYS THERE

Localise your product in parallel with the development cycle. Use Adobe XD, Figma, Sketch or your preferred collaborative environment and start working on localisation as soon as the product design is ready.

Ensure Quality

ALWAYS ATTENTIVE

We use tools – e.g. translation memory, machine translation, and QA checks . to enhance the quality and cohesion of translations. Get screenshots with contextual information and instant previous of potential issues.

Save Money

ALWAYS FAIR

Our plans are made to reward loyal collaborators with a fair price for the best service.
Our aim is to build long-term solid relationships based on trust.

Less work for developers

ALWAYS READY

Eliminate the hassle of localisation and let developers get back to their main tasks. Save hours with testers able to work and integrate their job directly with GitHub, Bitbucket, JIRA and more.
